

English C Course

Semester 1 2005

Theme: Current Topics in Science

Lecturer`s name: Tadahiro Kato

Course objectives:

To learn how to have effective discussions in English.
To improve oral communication skill.
To increase understanding of scientific and technological topics.

Course content:

This course consists of multi-themes. Students will handle a variety of topics, including science, technology, bioethics and social problems.

Information for students:

The goal of this class is for students to think in English about various topics of science and then communicate with others about them. Students should read the materials before class and be willing to make short presentations on certain points related to the main topics.

Textbook/materials:

No textbook will be required. All materials will be distributed in class.

Evaluation:

Ongoing assessment of demonstrated effort and ability in class 50%
Individual presentation 50%
